Post-Liquid Nitrogen Care Instructions

Today you had liquid nitrogen freezing done in the clinic.

Over the next several days, you can expect the lesion(s) that were treated to become red and may start to develop a scab. Sometimes a blister will also form.

Please wash the area daily with gentle soap and water. Apply Vaseline or Aquaphor ointment daily. If a blister does develop, please do not pop it. If a scab develops, please do not pick it off.

Protect the treated area from the sun with sun screen or protective clothing, such as a hat.

Please notify our office if the lesion does not resolve completely with treatment or if you have any other questions or concerns.

Thank you !
